RS-485 Interface

Power Supply

The diagram illustrates a power supply system for an LED display. It consists of the following components and connections:

- DC-DC Converter:** A DCJ0202 module converts the input +VDC (7.5-12VDC, 3A) to a +5V output. It includes a PWR_FLAG pin and a Reverse Voltage Protection feature.
- Voltage Doubler:** An LM78M05-T0252-2 module converts the +5V output to a +10V output (VBUS). It includes a PWR_FLAG pin and a Reverse Voltage Protection feature.
- LED Driver:** A VR5.0 module converts the +5V output to a current source for the LEDs. It includes a PWR_FLAG pin and a Reverse Voltage Protection feature.
- LEDs:** The LEDs are connected in a common anode configuration. The anodes are connected to +VDC, and the cathodes are connected to the output of the LED driver (VR5.0). The LEDs are labeled R5, R6, R7, R8, R9, R10, R11, R12, R13, R14, R15, R16, R17, R18, R19, R20, R21, R22, R23, R24, R25, R26, R27, R28, R29, R30, R31, R32, R33, R34, R35, R36, R37, R38, R39, R40, R41, R42, R43, R44, R45, R46, R47, R48, R49, R50, R51, R52, R53, R54, R55, R56, R57, R58, R59, R60, R61, R62, R63, R64, R65, R66, R67, R68, R69, R70, R71, R72, R73, R74, R75, R76, R77, R78, R79, R80, R81, R82, R83, R84, R85, R86, R87, R88, R89, R90, R91, R92, R93, R94, R95, R96, R97, R98, R99, R100.

(Max Vgs=+-20v, no zener needed)
