RS-485 Interface

Power Supply

The diagram illustrates a power supply system for an LED display. It consists of the following components and connections:

- DC-DC Converter:** A DCJ0202 module converts the input +VDC (7.5-12VDC, 3A) to a +5V output. It includes a PWR_FLAG pin and a Reverse Voltage Protection feature.
- Voltage Doubler:** An LM78M05-T0252-2 module converts the +5V output to a +10V output (VBUS). It includes a PWR_FLAG pin and a Reverse Voltage Protection feature.
- LED Driver:** A VR5.0 module converts the +5V output to a current source for the LEDs. It includes a PWR_FLAG pin and a Reverse Voltage Protection feature.
- LEDs:** The LEDs are connected in a common anode configuration. The anodes are connected to +VDC, and the cathodes are connected to the output of the LED driver (VR5.0). The LEDs are labeled with a 5x100mW power rating.
- Resistors:** A 4k7 resistor (R35) is connected between +5V and GND. A 2k2 resistor (R5) is connected between +10V and GND.
- Capacitors:** A 220uF capacitor (C1) is connected between +5V and GND. A 0.1uF capacitor (C2) is connected between +5V and GND. A 1uF capacitor (C3) is connected between +5V and GND.
- Other Components:** A DCJ0202 module is connected between +VDC and +5V. A VR5.0 module is connected between +5V and +10V. A LM78M05-T0252-2 module is connected between +5V and +10V.

(Max Vgs=+-20v, no zener needed)
